Software complexity is driving cost and risk

Software complexity is driving cost and risk

...of the cost of an embedded development project is now **software**.

#1

...reason for project delays
is **technical complexity**.

29%

...of the cost is specifically
in **embedded software**.

28%

...of embedded projects
have **>100k lines of code.**

We enable
our customers to focus
on what they do well

Product features

Application code

Apps and UX

Focus markets

Consumer

Staying connected at work,
at home, and on the go

Healthcare

Connecting healthcare devices
to improve accessibility and
efficiency

Industrial

IoT enabled machinery,
sensors, and systems to
enhance efficiency and
productivity

We are transforming how connected products are built, deployed, and maintained

SoCs , SiPs, and
reference designs

Next-gen hardware

SDKs, software stacks,
and development tools

Embedded software

Device management, embedded
observability, and location services

nRF Connect SDK

Modern, Easy-to-use, unified and scalable

Optimized for
Nordic SoCs

Bare-metal-like
performance, power
consumption and
memory footprint

Qualified and certified
wireless protocol stacks

Extensive range of
wireless stacks with
proven
interoperability

Extensive out-of-the-
box functionality

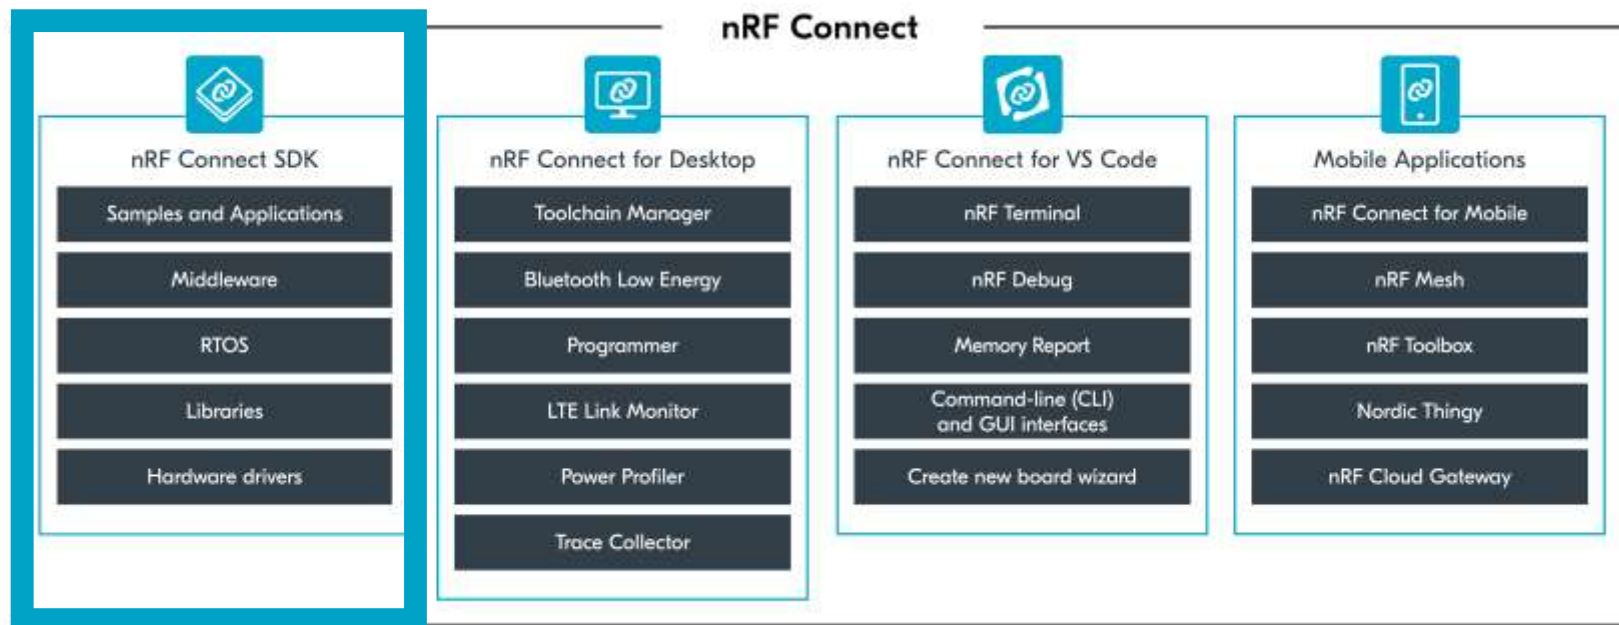

Reusable Zephyr-
inherited and Nordic-
developed software
components

Production-ready
quality

Hundreds of nRF
Connect SDK-based
products in the
market

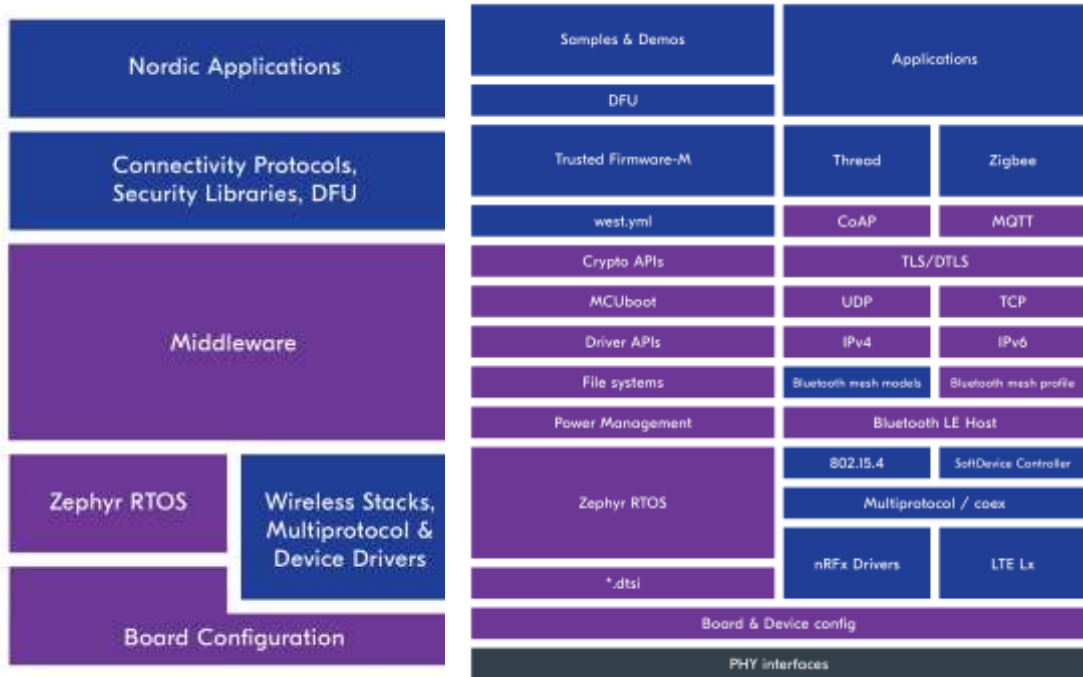

nRF Connect Platform Overview

nRF Connect SDK Repositories

- **nRF**: Application & connectivity protocols
- **nrfxlib**: compiled libraries where Nordic cannot distribute source code
- **nrfx**: peripheral drivers
- **Zephyr**: RTOS & board configuration (OS)
- **MCUboot**: Secure Bootloader (OS)
- Other repositories
 - Trusted Firmware-M, Matter, etc.
- Nordic and **Open Source** (OS) Code

Zephyr RTOS based SDK

Key Benefits of Zephyr RTOS

- **Designed & built for low power wireless**
- **Independent technology project**
- **Developed with a focus on security**
 - Have their own PSIRT team: fixes security vulnerabilities and notifies customers and public
- **Zephyr includes a lot of fundamental pieces of code and functionality**
 - Nordic can focus on other important features
 - Future-proof platform for tomorrow's applications
- **Scalability**
 - Very small configurations for constrained devices (min 8 kB e.g. simple LED blinking application)
 - Powerful, feature-rich, configurations for large memory, high-processing pow

Zephyr™ Project

Nordic - Early Adopter Since 2016

One of The Biggest Contributor to the Zephyr Project

Platinum Member

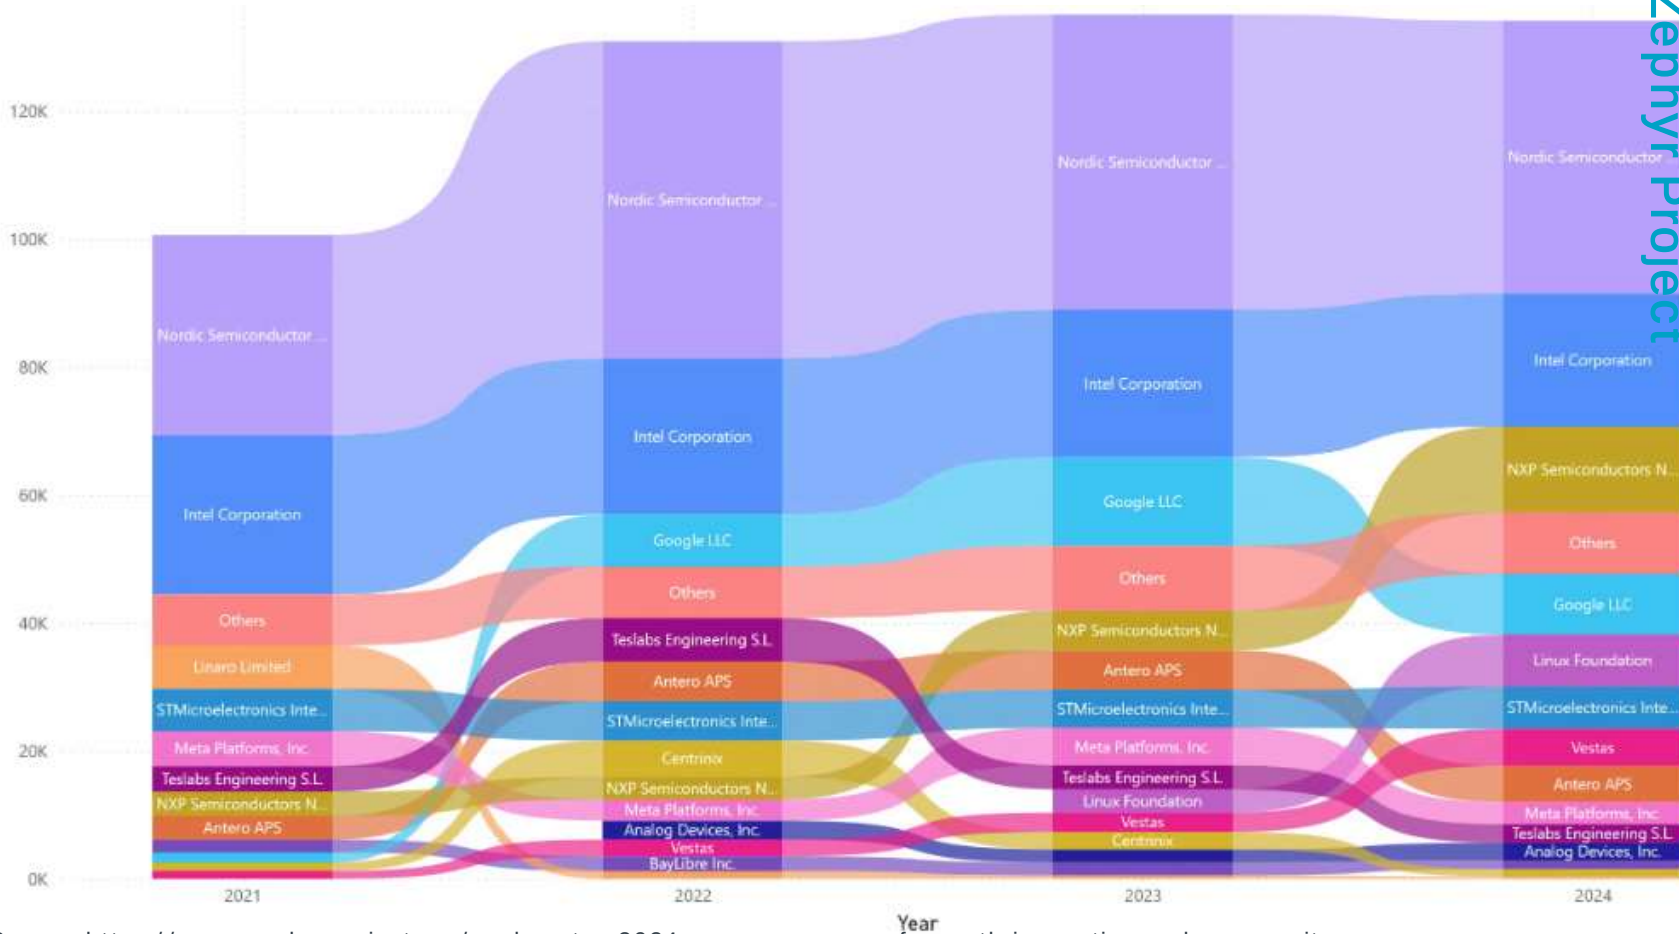

Active code contributor

Full integration into Nordic tools

Nordic – Biggest Contributor to

Zephyr Project

EU Cyber Resilience Act (CRA) requirements

Nordics FOTA solution is purpose-built for CRA compliance

Vulnerability handling period

The support period for which the manufacturer ensures the effective handling of vulnerabilities should be **no less than five years**, unless the lifetime of the product with digital elements is less than five years...Where the time the product with digital elements is reasonably expected to be in use is longer than five years...manufacturers should accordingly **ensure longer support periods**.

Section 60

Automatic security updates

Ensure that vulnerabilities can be addressed through security updates, including, where applicable, **through automatic security updates** that are installed within an appropriate timeframe

Annex 1 – Part I, (2)(c)

Secure updates distribution

Provide for mechanisms to securely distribute updates for products with digital elements to ensure that vulnerabilities are fixed or mitigated in a timely manner and, where applicable for security updates, in an automatic manner

Annex 1 – Part II, (7)

Strengthening lifecycle value

Software and Cloud Leadership today

U.S. CYBER TRUST MARK

Secure and compliant updates

Enterprise-grade security and EU CRA ready

Secure architecture

Multi-layered secure chip-to-cloud communication combined with firmware image signing and update verification

Controlled deployment

Configurable to "four eyes principal", requiring 2 people's authorization to launch a firmware update cycle

Traceability and compliance

Audit log with full audit trail of information such as date, time, firmware version, user, keys cohort ++

firmware updates instantly

Memfault

Embedded
observability

Fix defects before your
customer finds them

Location
services

Versatile location services
tracking your devices
wherever they are

Optimized and advanced lifecycle services

Enhanced device performance

Embedded observability

Fix defects before your customer finds them

Device management

Securely connect your devices and deploy firmware updates instantly

Location services

Versatile location services tracking your devices wherever they are

FOTA simplified

Controlled, low risk update workflows at scale

Automated rollout management

Highly automated and flexible by allowing you to create custom groups of devices and deploy staged rollouts by group

One-click abort

Should the unforeseen happen we help you mitigate risk by providing "one-click" abort during device update operation

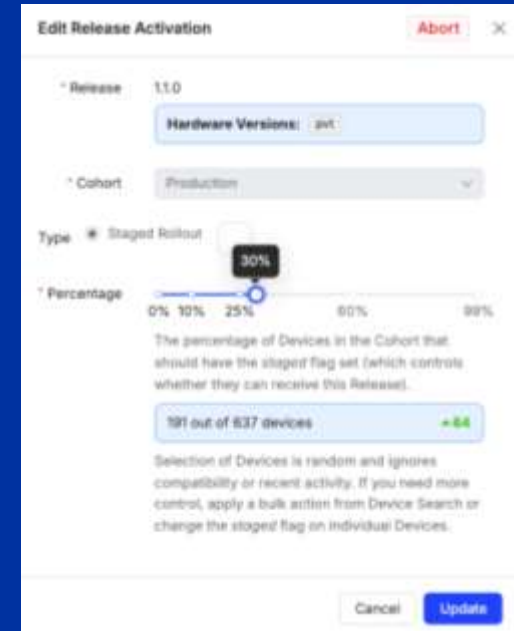

Version control and rollback

Enables version checking and controlled rollback of firmware versions minimizing downtime and maintaining operational continuity

Scale to millions of devices

Our FOTA solution is being successfully used by companies everything from pilot deployments to millions of connected devices
